SUMMARY

Backend engineer with 4+ years on mission-critical C and Java/Spring systems handling 400M monthly transactions for 17.9M users. AI healthtech founder, ICPC international qualifier. Passionate about agentic AI and climbing.

EXPERIENCE

SHINHAN BANK (TOP-3 KOREAN COMMERCIAL BANK, 30M+ RETAIL CUSTOMERS)

Seoul

Senior Software Engineer, Investment Service

Jan 2024 - Apr 2025

- Engineered a recommendation microservice on a 17.9M-user platform handling 400M monthly transactions, lifting stability 8% by tuning batch processing, SQL query plans, and Redis cache layers.
- Shipped backend services for the mobile-first fund product line in Java and Spring with REST APIs, reaching 10M+ MAUs at 50% lower customer fees than the branch-only line.
- Drove modularization of the fund batch codebase during the NEXT core banking migration, completing 100% conversion ahead of every other subdivision.
- Modeled latency, throughput, and storage trade-offs for a \$3M Financial Consumer Protection Law system, winning C-suite approval for an in-house microservices build over a vendor module.

Software Engineer, Financial Service

Aug 2021 - Jan 2024

- Grew pension client assets 13% YoY by integrating a multi-regression recommendation model into the digital pension service in C, refining feature pipelines from customer behavior telemetry.
- Resolved \$130M in court-mandated Lime Fund refunds by engineering an idempotent SQL redemption and bidirectional clawback workflow on Oracle at 100% regulatory compliance and zero audit findings.
- Cut foreign-fund pricing pipeline latency 40% and exceeded regulator pricing accuracy standards by replacing Bloomberg's overseas feed with a Korea-hosted KG market-data feed, instrumented for daily NAV SLAs.

KINDORI HEALTH (MEDICAL AI)

Gwangju

Founder & Machine Learning Engineer

Sep 2020 - Jul 2021

- Cut patient-facing diagnostic questions 70% (58 to 15) at 95% accuracy by designing the feature pipeline, training a supervised regression model on Korea Medi Institute data, and shipping it as a production inference engine.
- Productized the model into a deployable React frontend and mobile inference service with a 3-person team, securing MOUs with 2 hospitals.

FORCS (MILITARY SERVICE ALTERNATIVE, E-DOCUMENT SAAS)

Seoul

Product Manager

Jun 2017 - Sep 2019

- Won an enterprise contract at Resorts World Sentosa (Singapore's largest casino) by leading the PaaS-to-SaaS transition and refining the feature backlog through data-driven tests.
- Acquired 50 enterprise subscriptions in 2 months by running field interviews with bus drivers and turning UX gaps into shipped requirements.

EDUCATION

DUKE UNIVERSITY, Master of Business Administration

Durham, NC

Tech Club (Industry Cabinet) | Merit Scholarship 80% | GMAT 695 (top 1.4%) | 2nd at SEA MBA AI Buildathon

May 2027

KOREA UNIVERSITY, Bachelor of Engineering, Computer Science and Engineering

Seoul

Awards: ICPC International Qualifier, Korean National Team (top 4 nationally) | Bronze Prize, Nexon Game Design Competition

Jul 2021

AI BUILDING

Android Phone Agent: Crafted on Claude API that decomposes natural language into multi-step UI actions across 20+ apps via Accessibility Services.

Sequential AI Agents: Building on Google ADK with planner-executor architecture and multi-step tool-call chaining.

Payment Microservice: Building a Java/Spring REST service with JWT auth, idempotency keys, OpenTelemetry, and Kubernetes on AWS EKS for payment platforms.

TECH STACK

AI Tools: Claude API, Google ADK, Microsoft Copilot, Amazon Bedrock

Distributed Systems: REST/gRPC/GraphQL, Microservices, Redis, Kubernetes, Docker, Prometheus, Grafana, OpenTelemetry, CI/CD

Technical: C, Java, Python (FastAPI, PyTorch), TypeScript, Node.js, SQL (PostgreSQL, Oracle), AWS, React, Claude API
